PHILIPS

sense and simplicity

Highlights

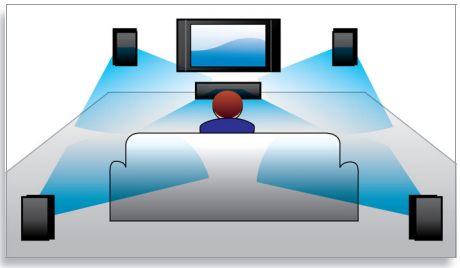
Treble and Bass Control

Treble and bass are equalizer features that control the high and low frequency sound levels of your audio respectively. Treble specifically regulates the amplification of the high tones in the music, while bass controls the amplification level of the low tones. Using the up and down keys, the listener can conveniently place more or less emphasis on the low and high tones, or leave treble and bass flat to play back music according to its original recorded setting. Treble and Bass Control lets you listen to your music the way you like it.

Class 'D' Amplifier

The Class 'D' Digital Amplifier takes an analogue signal, converts it into a digital signal and then amplifies the signal digitally. The signal then enters a demodulation filter to give the final output. The amplified digital output delivers all the advantages of digital audio, including improved sound quality. In addition, the Class 'D' Digital Amplifier has over 90% efficiency compared to traditional AB amplifiers. This high efficiency translates into a powerful amplifier with a small footprint.

Dolby Digital



Because Dolby Digital standards, the world's leading digital multi-channel audio standards, make use of the way the human ear naturally processes sound, you experience superb quality surround sound audio with realistic spatial cues.

HDMI 1080p

HDMI 1080p upscaling delivers images that are crystal clear. Movies in standard definition can now be enjoyed in true high definition resolution - ensuring more details and more true-to-life pictures. Progressive Scan (represented by "p" in "1080p") eliminates the line structure prevalent on TV screens, again ensuring relentlessly sharp images. To top it off, HDMI makes a direct digital connection that can carry uncompressed digital HD video as well as digital multi-channel audio, without conversions to analogue - delivering perfect picture and sound quality, completely free from noise.

Play and charge iPod/iPhone/iPad

Enjoy your favourite MP3 music while charging your iPod/iPhone/iPad! The dock lets you connect your portable device directly to the Philips system so you can listen to your favourite music in superb sound. It also charges your iPod/iPhone/iPad while it plays so you can enjoy your music and not have to worry about your portable player battery running out. The system automatically charges your portable device while it is docked.

Gold-plated speaker connector

The gold-plated speaker connector ensures better audio signal transmission compared to traditional click-fit connections. It also minimises the electrical signal loss from the amplifier to the speaker box, resulting in sound reproduction that's as close to reality as possible.
